

Grange Bacstel-iP systems for Windows and IBM iSeries

HTTP error 406, T700

BACS detailed error code 1932 – Account number not all Numeric.

In a particular set of circumstances, a validated file may be rejected by BACS with HTTP error 406, and error code T700

The lower level error message from BACS is # 1932 – Account number not all numeric. The whole file is rejected.

This occurred if the Sort code was in error (not on file) and the Account number was invalid (not all numeric). The validation system returned the first error (a warning) but did not report the second error (fatal).

This applies to the validation API **ch_com.dll** versions 1.6.4.5 and previous.

An updated version (1.6.4.6) to resolve this issue is now available for download from:

www.grangesystems.com/chcom1646
